Which problem/business need do you want to address?

TL;DR: This idea addresses the critical business need of improving product personalization.

Longer Version : We aim to address two key issues:

- a. Customer Satisfaction: Many customers desire personalized products. Our solution enhances the shopping experience by allowing customers to customize products to their liking.
- b. Manufacturing Efficiency: For businesses, especially OEMs, our AI-powered system streamlines the customization process, reducing costs and improving production efficiency.

Why do you think your idea will address the problem/business need?

Our idea offers the solution by catering to the growing demand for personalized products in the automotive industry. It does this through advanced AI technology that streamlines manufacturing, enhancing customer satisfaction and business efficiency, giving us a competitive edge.

Salient features are :

1. Automated requirement gathering through human-like conversation.
2. Automated tailor made solution in line with company's playbook.
3. Visual preview of automobile based on customisation.

Who is the primary contact person for this one-pager?

Name : Aditya Vyas

What would happen if we didn't address the problem/business need?

Failing to address this business need would mean overlooking two significant opportunities:

1. Providing a top-tier experience to customers.
2. Potentially breaking into the lucrative luxury segment.

Customers are showing a clear demand for increased personalization, as evidenced in a [McKinsey report](#). ("In a recent survey of potential Chinese luxury-vehicle buyers, nearly 84 percent of respondents say that the ability to personalize their vehicle is important or very important.")

Failing to address this need could lead to missing out on valuable opportunities

Who are the key stakeholders regarding the problem/business need?

Following are the major stakeholders here:

1. Customers
2. OEMs
3. Suppliers

Idea details

Idea :

TL;DR : Essentially, we're creating a virtual personalization expert, available anytime and anywhere, well-versed in customization, playbooks and policies, to deliver tailor-made personalized solutions.

Concept:

Our concept is an all-inclusive automobile personalization assistant that uses natural conversations to gather user preferences. It then suggests and maps potential configurations, converting them into requirements for automated implementation.

This innovative approach simplifies user preference consolidation, replacing costly manual processes with a virtual personalization expert available 24/7. We also offer users a visual preview of their customized product, ensuring their complete satisfaction before purchase.

Note: Some part of the idea was inspired from this [video](#).

High Level Solution:

The solution comprises of following components:

- 1.Data ingestion : (requirement elicitation from user through conversation)
- 2.Recommendation Engine : (to generate tailor-made recommendation)
- 3.Knowledge Base : (the knowledge about companies policy and playbooks are feeded here).
